2013 JUN 17 PM 3: 47

2012 Annual Drinking Water Quality Report

Farmington Water Association, Inc. PWS ID: 0020003 May 23, 2013

We're very pleased to provide you with this year's Annual Water Quality Report. We want to keep you informed about the excellent water and services we have delivered to you over the past year. Our goal is and always has been, to provide to you a safe and dependable supply of drinking water. Our water source is groundwater and our wells draw from the Paleozoic Aquifer.

Our source water assessment has been completed for our public water system to deliver the overall susceptibility of its drinking water supply to identify potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. Our wells ranked a lower susceptibility to contamination.

We're pleased to report that our drinking water meets all federal and state requirements.

If you have any questions about this report or concerning your water utility, please contact Roger F. Wigginton at 662-286-2815. We want our valued customers to be informed about their water utility. If you want to learn more, please attend one of our regular meetings held at 5:00 P.M on the second Thursday of each month at the Farmington Town Hall.

The Farmington Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. The table below shows the results of our monitoring for the period of January 1st to December 31st, 2012. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

MRDL: Maximum Residual Disinfectant Level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Parts per million (ppm) – Milligrams per liter (mg/L).

Parts per billion (ppb) - Micrograms per liter (ug/L).

				TI	EST RESULT	`S

^{*}Most recent sample. No sample was required in 2012

*** A message from MSDH concerning radiological sampling ***

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the MS State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Karen Walters, Director of Compliance & Enforcement, Bureau of Public Water Supply, at 601-576-7518.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Farmington Water Association is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. Please call 601-576-7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

The Consumer Confidence Report will not be mailed to you; however, you may obtain a copy from the Farmington Water office located on Farmington Road at 4100 CR 200. If you have any questions, please call 662-286-2815.

STATE OF MISSISSIPPI, COUNTY OF ALCORN

2013 JUN 17 PM 3: 47

PERSONALLY CAME before me, the undersigned, a Notary Public in and for Alcorn County, Mississippi, the CLERK of THE DAILY CORINTHIAN, a newspaper published in the City of Corinth, First Judicial District of Alcorn County, in said State, who being sworn, deposes and says that THE DAILY CORINTHIAN is a newspaper as defined and prescribed in Senate Bill No. 203 enacted at the regular sesion of the Mississippi Legislature of 1948, amending Section 1858, of the Mississippi Code of 1942, and that the publication of a notice, of which the annexed is a copy, in the manner of: has been made in said paper _____ times consecutively, to-wit: On the _____ day of ____ On the _____ day of ____ On the _____ day of ID No. 1536 Commission Expires On the _____day of NOO WHOOM SWORN TO and subscribed before me this .day of Corinth, Miss., To THE DAILY CORINTHIAN, Dr. (Name Newspaper) __times and making proof, \$___537.60. 2012 Annual Drinking Water Quality Report

Farmington Water Association, Inc. PWS ID: 0020003 May 23, 2013

We're very pleased to provide you with this year's Annual Water Qushity Report. We want to keep you fifther debout the excellent water and services we have delivered to you over the past year. Our goal is gaid always his been, to provide to you a safe and dependable supply of drinking water. Our water source groundwater and our wells draw from the Peleozole Aquifer.

Or source water assessment has been completed for our public water system to deliver the exceptibility of its drinking water supply to identify potential sources of contamination. The susceptibility rankings assigned to each well of this system are provided below. A report containing differentiation is now the susceptibility determinations were made has been furnished to our public system and its ovailable for viewing upon request. Our wells ranked a lower susceptibility to contamin

We're pleased to report that our drinking water meets all federal and state requirements

If you have any questions about this report or concerning your water utility, please contact Roger F. Wagginson at 662-286-2815. We want our valued outstoners to be informed about their water utility. If you want to learn more, please attend one of our regular meetings beld at 500 P.M on the second Thursday of each mouth at the Farmington Town Hall.

The Farmington Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. The table below shows the results of our monitoring for the period of January 1st to December 31st, 2012. As water travels over the land or underground, it can pick up substances or comminicants such as microbox, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking woter, may be reasonably expected to centain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health (isk.

Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Copylaphnast Level - The "Maximum Allowed" (MCL) is the highest level of a contaminang that is allowed in diffusing water. MCLs are set as close to the MCLOs as feasible using the best available freatment technology.

Maximum Contuminant Level Goal - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

MRDL: Maximum Residual Disinfectant Level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence—that addition of a disinfectant is necessary for control of microbial contaminants.

Parts per million (ppm) - Milligrams per liter (mg/L).

Parts per billion (unb) - Microvrams per liter (unf) \

*Most recent sample. The samples was required in the sample was a required in the sample with the Radionaucides Rule, all community public water supplies were required to sample quarterly for radionaucides beginning January 2007 - December 2007, Youry public water supplies ounpleted sampling by the schedoled deadline, lowever, during an axid for the MS state Department of Health Radiotogical Health Laboratory, the Davinonnental Protection Agency (EIPA) suspended analyses and reporting of radiological complance samples and recusls until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, you water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any quisations, please contact Karen Walters, Director of Compliance & Enforcement, Bureau of Public Water Supply, at 601-576-7518.

Additional Information for Lead*

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plauming. The Formington Water Association is responsible for providing high quality drinking water but cannot control the variety of materials used in pluming components. When your water has been sittling for several hours, you can minimize the potential for lead exposer by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, toward, information on load in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Idoline or at lately/however, poor/selevater/lead.

Please call 601-576-7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be mistrobes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential behalt effects can be obtained by calling the linvironmental Protection Agency's Safe Drinking Water Hotine at 1-800-466-4793;

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunor-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at fis from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosportions and other microbiological contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

The Consumer Confidence Report will not be mailed to you; however, you may obtain a copy from the Parnington Water office located on Farmington Road at 4100 CR 200. If you have any questions, please call 662-286-2815.
